

SL-T18 Transportation Vibration Tester

Product information

Simulation products in transportation state of environmental assess product packaging design, the rationality and structure strength.

Test object: Packaging for shipment of the products.

Test program: Will the packaging products with a certain speed vibration corresponding time.

Result assessment: By vibration testing products shall promote function and appearance was damaged.

Product introduction

The instrument consists of two parts: the control box and Simulation products in transportation state of environmental assess product packaging design, the rationality and structure strength.

Test object: Packaging for shipment of the products.

Test program: Will the packaging products with a certain speed vibration corresponding time.

Result assessment: By vibration testing products shall promote function and appearance were damaged.

Technical parameter

Vibrating frequency 100-300rpm

Vibrating range 25.4mm(1")

Timer 0-99999 hour

Vibrating manner Rotary (positives type)turn

Maximum load 100kg

Testing Standards

ASTMD-999.
